SYLLABUS

Cambridge International AS
Environmental Management

8291

For examination in June and November 2020 and 2021
Changes to the syllabus for 2020 and 2021

The latest syllabus is version 1, published September 2017. There are no significant changes which affect teaching.

You are strongly advised to read the whole syllabus before planning your teaching programme.

Why choose Cambridge Assessment International Education?

Cambridge Assessment International Education prepares school students for life, helping them develop an informed curiosity and a lasting passion for learning. We are part of the University of Cambridge.

Our international qualifications are recognised by the world’s best universities and employers, giving students a wide range of options in their education and career. As a not-for-profit organisation, we devote our resources to delivering high-quality educational programmes that can unlock learners’ potential.

Our programmes and qualifications set the global standard for international education. They are created by subject experts, rooted in academic rigour and reflect the latest educational research. They provide a strong platform for students to progress from one stage to the next, and are well supported by teaching and learning resources.

Every year, nearly a million Cambridge learners from 10,000 schools in 160 countries prepare for their future with an international education from Cambridge International.

Cambridge learners

Our mission is to provide educational benefit through provision of international programmes and qualifications for school education and to be the world leader in this field. Together with schools, we develop Cambridge learners who are:

- confident in working with information and ideas – their own and those of others
- responsible for themselves, responsive to and respectful of others
- reflective as learners, developing their ability to learn
- innovative and equipped for new and future challenges
- engaged intellectually and socially ready to make a difference.

Learn more about the Cambridge learner attributes in Chapter 2 of our Implementing the curriculum with Cambridge guide at www.cambridgeinternational.org/curriculumguide
Why Cambridge International AS & A Levels?

Cambridge International AS & A Levels are international in outlook, but retain a local relevance. The syllabuses provide opportunities for contextualised learning and the content has been created to suit a wide variety of schools, avoid cultural bias and develop essential lifelong skills, including creative thinking and problem-solving.

Our aim is to balance knowledge, understanding and skills in our qualifications to enable students to become effective learners and to provide a solid foundation for their continuing educational journey. Cambridge International AS & A Levels give students building blocks for an individualised curriculum that develops their knowledge, understanding and skills.

Cambridge International AS & A Level curricula are flexible. It is possible to offer almost any combination from a wide range of subjects. Cambridge International A Level is typically a two-year course, and Cambridge International AS Level is typically one year. Some subjects can be started as a Cambridge International AS Level and extended to a Cambridge International A Level.

There are three possible assessment approaches for Cambridge International AS & A Level:

Option one

- Cambridge International AS Level (standalone AS)

  Students take the Cambridge International AS Level only. The syllabus content for Cambridge International AS Level is half of a Cambridge International A Level programme.

Option two

- Cambridge International A Level
  (remainder of A Level)

- Cambridge International AS Level
  (AS is first half of A Level)

  Students take the Cambridge International AS Level in Year 1 and in Year 2 complete the Cambridge International A Level.

Option three

- Cambridge International A Level

  Students take all papers of the Cambridge International A Level course in the same examination series, usually at the end of the second year of study.

Every year thousands of students with Cambridge International AS & A Levels gain places at leading universities worldwide. Cambridge International AS & A Levels are accepted across 195 countries. They are valued by top universities around the world including those in the UK, US (including Ivy League universities), European nations, Australia, Canada and New Zealand. Learners should check the university website for specific entry requirements before applying.

Did you know?

In some countries universities accept Cambridge International AS Levels in their own right as qualifications counting towards entry to courses in the same or other related subjects. Many students who take Cambridge International AS Levels also choose to progress to Cambridge International A Level.

Why Cambridge International AS Level Environmental Management?

About the syllabus
Cambridge International AS Level Environmental Management is accepted by universities and employers as proof of knowledge and understanding of the key issues affecting the environment on a variety of scales. Through their study, candidates gain lifelong skills and awareness including:

- a knowledge of environmental processes and the impacts of societies on the environment
- the scientific principles that underpin issues of sustainability and environmental management
- the causes of key issues affecting the environment as well as possible ways of managing these
- the pressures which impact on the environment and potential solutions to these.

The syllabus is designed to encourage learning through suitable case studies, both local and global. The syllabus provides a good foundation for further study of Environmental Science and Management or related subjects in higher education. It is suitable for candidates of various ages, backgrounds and nationalities and contributes towards general education and lifelong learning.

Candidates do not need to have studied environmental science/management before taking this course. The course is designed to attract candidates with a good scientific background along with an awareness of broad environmental matters. A good foundation for the course would be a combination of some, but not necessarily all of the following: biology, geography, general science, physics, chemistry, environmental science and management.

Guided learning hours
Guided learning hours give an indication of the amount of contact time teachers need to have with learners to deliver a particular course. Our syllabuses are designed around 180 guided learning hours for Cambridge International AS Level, and around 360 guided learning hours for Cambridge International A Level.

These figures are for guidance only. The number of hours needed to gain the qualification may vary depending on local practice and the learners’ previous experience of the subject.

Prior learning
We recommend that candidates who are beginning this course should have previously completed a Cambridge O Level or Cambridge IGCSE® course in Environmental Management or Geography, but a foundation based within the sciences is sufficient. The most important attribute is to possess an interest in the subject matter of environmental science and management, and a concern and/or commitment to issues that arise in managing the Earth’s environment.

Progression
Cambridge International AS Level Environmental Management provides a suitable foundation for further courses in this and related subjects. It is also suitable for candidates intending to pursue careers or further study in Environmental Management, or as part of a course of general education.

We recommend learners check the Cambridge International recognitions database and the university websites to find the most up-to-date entry requirements for courses they wish to study.
Cambridge AICE Diploma is the group award of the Cambridge International AS & A Level. It gives schools the opportunity to benefit from offering a broad and balanced curriculum by recognising the achievements of candidates who pass examinations from different curriculum groups.

Learn more
For more details go to www.cambridgeinternational.org/aice

“ Our research has shown that students who came to the university with a Cambridge AICE background performed better than anyone else that came to the university. That really wasn’t surprising considering the emphasis they have on critical research and analysis, and that’s what we require at university. ”

John Barnhill, Assistant Vice President for Enrollment Management, Florida State University, USA
Introduction
Syllabus for examination in 2020 and 2021.

Teacher support

We offer a wide range of practical and innovative support to help teachers plan and deliver our programmes and qualifications confidently.

The support package for our Cambridge International AS & A Levels gives teachers access to a worldwide teaching community enabling them to connect with other teachers, swap ideas and share best practice.

Teaching and learning
- Support materials provide teachers with ideas and planning resources for their lessons.
- Endorsed textbooks, ebooks and digital resources are produced by leading publishers. We have quality checked these materials to make sure they provide a high level of support for teachers and learners.
- Resource lists to help support teaching, including textbooks and websites.

Exam preparation
- Past question papers and mark schemes so teachers can give learners the opportunity to practise answering different questions.
- Example candidate responses help teachers understand exactly what examiners are looking for.
- Principal examiner reports describing learners’ overall performance on each part of the papers. The reports give insight into common misconceptions shown by learners, which teachers can address in lessons.

Professional development

Face-to-face training
We hold workshops around the world to support teachers in delivering Cambridge syllabuses and developing their skills.

Online training
We offer self-study and tutor-led online training courses via our virtual learning environment. A wide range of syllabus-specific courses and skills courses is available. We also offer training via video conference and webinars.

Qualifications
We offer a wide range of practice-based qualifications at Certificate and Diploma level, providing a framework for continuing professional development.

You can find useful information, as well as share your ideas and experiences with other teachers, on our social media channels and community forums. Find out more at www.cambridgeinternational.org/social-media
1 Syllabus content at a glance

The content of this syllabus is designed to encourage a broad, thought provoking study of the environment, focusing on key issues in its management for sustainability.

- It includes sections on:
  - the lithosphere including plate tectonics and management of its consequences, weathering, soils and mass movements and their management, management of resources including energy resources and land
  - the atmosphere including the impact of its structure on weather and climate and management of the consequences of weather, atmospheric pollution and its management
  - the hydrosphere including sustainable management of water in the context of the water cycle and human activity as well as water pollution and its management
  - the biosphere including ecology of biomes and the effect of human activity, conservation and restoration of ecosystems as well as human population growth and sustainability.

- In each case there is a focus on environmental issues and their management at local, regional and global levels in less economically developed countries (LEDCs) and more economically developed countries (MEDCs).

- Issues such as global warming, industrial pollution, the impacts of rapid population growth and urbanisation are balanced with successful environmental management strategies such as National Park creation, sensitive urban design as well as management and development for sustainability.

- Key questions are used to help structure the teaching of the assessed content.

- Notes for guidance are included to help teachers to exemplify and deliver appropriate teaching programmes.
# Assessment at a glance

All candidates take:

<table>
<thead>
<tr>
<th>Paper 1</th>
<th>1 hour 30 minutes</th>
<th>Paper 2</th>
<th>1 hour 30 minutes</th>
</tr>
</thead>
</table>
| **Lithosphere and Atmosphere**  
   Paper 1 is divided into two sections.  
   Section A: short answer questions based on sets of data, diagrams or extracts.  
   Section B: Candidates choose one essay question from a choice of three. Each essay question is in two parts. Questions will be drawn from parts of the syllabus not covered in Section A.  
80 marks  
This paper will be weighted at 40% of the final total mark. | **Hydrosphere and Biosphere**  
   Paper 2 is divided into two sections.  
   Section A: short answer questions based on sets of data, diagrams or extracts.  
   Section B: Candidates choose one essay question from a choice of three. Each essay question is in two parts. Questions will be drawn from parts of the syllabus not covered in Section A.  
80 marks  
This paper will be weighted at 40% of the final total mark. |
3 Syllabus aims and assessment objectives

3.1 Syllabus aims

Through following this syllabus, candidates should:

1. develop a knowledge of the Earth’s natural systems and the effects of human activity on these systems
2. be challenged to think about important environmental problems which face the world today
3. understand that solutions to environmental issues are not easy to find
4. recognise that the environment is an important social and political issue
5. understand that while environmental issues can be debated by government, non-government and scientific organisations, there is an important role for individuals in thinking about these issues and in considering solutions.

The syllabus will address a number of basic issues which are included as learning objectives:

- people are affected by, and respond to natural phenomena in many different ways
- rapid human growth is the fundamental environmental issue
- the sustainable use of resources is fundamental to all solutions
- human beings affect the environment of the whole planet, thus the importance of a global perspective
- urban environmental issues need to be given an important focus.

3.2 Assessment objectives

There are three assessment objectives in Cambridge International AS Level Environmental Management.

AO1: Knowledge and understanding
Candidates will be expected to demonstrate knowledge and understanding of:

1. the important environmental issues facing the world in the 21st century (within the confines of the syllabus)
2. environmental patterns of organisation, causality and process
3. policies and mechanisms for managing the environment at local, regional and global levels
4. critical and supportive evaluations of environmental management policies
5. relevant scientific phenomena, facts, laws, definitions, concepts and theories, with use of scientific vocabulary, terminology and conventions (including symbols, quantities and units) relevant to the content of the syllabus.

AO2: Handling information and problem solving
Candidates should be able to:

1. locate, select and organise relevant information from a variety of data sources and communicate it clearly
2. describe, interpret and offer explanations for data and information presented in the form of tables, graphs, maps, photographs and illustrations
3. manipulate numerical, graphical and other data
4. use information to identify patterns, report trends and draw inferences.
AO3: Enquiry and investigation
Candidates should be able to:

1. formulate hypotheses and predictions on the basis of observations and prior research (including plan, select appropriate apparatus/materials and carry out experiments in order to test their hypothesis or prediction)
2. make accurate observations and measurements and record these in an appropriate form (e.g. graphs, tables, diagrams, etc.) and use statistical tools to analyse their data
3. assess the reliability of their data and identify ambiguities
   - make deductions and formulate conclusions based on their data
   - evaluate the validity of their method
   - discuss the implications of findings in terms of the effect on the environment
   - value judgements of individuals, organisations and self.

The table below shows the approximate weightings for each of the assessment objectives:

<table>
<thead>
<tr>
<th>Assessment objective</th>
<th>Weighting</th>
</tr>
</thead>
<tbody>
<tr>
<td>AO1: Knowledge with understanding</td>
<td>45%</td>
</tr>
<tr>
<td>AO2: Handling information and problem solving</td>
<td>35%</td>
</tr>
<tr>
<td>AO3: Enquiry and investigation</td>
<td>20%</td>
</tr>
</tbody>
</table>

The allocation of marks is shown below according to the different papers.

<table>
<thead>
<tr>
<th>Assessment objectives</th>
<th>Papers 1 and 2 Section A</th>
<th>Papers 1 and 2 Section B</th>
<th>Paper 3 Coursework</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Question 1</td>
<td>Question 2</td>
<td>Question 3, 4 or 5</td>
</tr>
<tr>
<td>AO1</td>
<td>15</td>
<td>15</td>
<td>60</td>
</tr>
<tr>
<td>AO2</td>
<td>25</td>
<td>25</td>
<td>20</td>
</tr>
<tr>
<td>AO3</td>
<td>–</td>
<td>–</td>
<td>40</td>
</tr>
</tbody>
</table>

Papers 1 and 2 have identical mark allowances as the papers have a similar format.

The mark allowances for Papers 1 and 2 are doubled, as they are totalled across both papers.
4 Syllabus content

This syllabus defines the ‘environment’, by reference to the four traditional subdivisions of the global environment:

- The **lithosphere** or the upper mantle of rock and crust, that forms the tectonic plates upon which the continents lie.
- The **atmosphere** or the gaseous shell outside these two non-living components.
- The **hydrosphere** or the body of water, present as ice, liquid water or water vapour.
- The **biosphere** or the living organisms that have established themselves in the other three spheres.

The syllabus recognises that human population growth has become the dominant factor producing environmental change. Since the majority of humans now live in cities, issues related to the growth of urban and industrial areas and the impact of rapid population growth are an important aspect of the syllabus.

Environmental management is concerned with both local and global issues and with the various ways in which societies, governments and economic activity (industry, agriculture and urban areas) use, misuse and attempt to manage both local and global environments. While environmental management can often be presented in a negative light by emphasising pollution, exploitation and misuse, it is important to give recognition to the positive ways in which we manage our environment. Thus, issues such as global warming, industrial pollution and the impact of rapid population growth need to be balanced with others like the creation of National Parks, sensitive urban design and sustainable management/development.

The syllabus reflects a contemporary concern with sustainable management. Through their study of environmental management, it is hoped that candidates will learn to appreciate that the exploitation of the environment has often had a negative impact and that we should aim for a sustainable management of resources.

The syllabus focuses on environmental issues and their management at local, regional and global levels and is organised in three sections:

- **Key Questions:** These identify major aspects of the syllabus, but are not intended as a prescriptive teaching programme
- **Content**
- **Notes for Guidance:** These offer some examples of the type of topics which are suitable and other suggestions for teachers.

Examination questions will be derived from the **Content** column. Candidates should show knowledge and understanding of the points listed in the Content column(s) and be able to handle information and solve problems relating to these points.
# The Lithosphere

## Key Question Content

1. **What are the key elements of the structure of the Earth?**
   - The internal structure of the Earth including the characteristics of the core, mantle, and crust.
   - Evidence derived from palaeomagnetism, palaeontology and geological fit.

2. **What natural hazards are derived from plate movement and how are they managed?**
   - Earthquakes (e): cause, process and effect; measurement by magnitude and intensity; frequency; different impacts in countries with contrasting levels of economic development.
   - Measurements using the Richter scale and Mercalli scale.

3. **What natural and man-made processes contribute to soil deterioration and how can they be prevented?**
   - Causes of soil movement or steep and gentle slopes managed.
   - Soil erosion and deposition through human activity and natural events.
   - Examples should include non-renewable resources (coal, oil and natural gas), and renewable resources (water – HEP, tide and waves, wind and solar energy).

4. **What are the major causes of soil deterioration and erosion and how can they be prevented?**
   - Soil formation and characteristics, including texture, horizons, and characteristics of the subsoil and surface horizons.
   - Human influences include deforestation and building. Slope management policies including slope protection, afforestation, drainage and surface protection.
   - Case studies contrasting the policies of two countries or by using resources, e.g. wind, water and solar energy.

5. **What pressures have human activity placed upon the resources of the lithosphere?**
   - Energy resources in countries with contrasting levels of economic development, including demand and the depletion of resources in MEDCs; LEDC priorities including demand and the depletion of resources in MEDCs; LEDC priorities including demand and the depletion of resources in MEDCs.
   - The nature of renewable, non-renewable, alternative and recyclable resources.
   - Potential for future generations?
<table>
<thead>
<tr>
<th>The atmosphere</th>
<th>Notes for Guidance</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Key Question</strong></td>
<td><strong>Content</strong></td>
</tr>
<tr>
<td>1 What are the structural components of the atmosphere, and why is it important to understand their characteristics?</td>
<td>The structure of the atmosphere includes troposphere, stratosphere, mesosphere, and thermosphere. Each zone is described in terms of composition, temperature, and variations in air density. The interaction of incoming and outgoing radiation within the troposphere and stratosphere impacts the Earth’s energy budget. The troposphere is crucial for weather and human activity.</td>
</tr>
<tr>
<td>2 What is the pattern of air movement in the troposphere and how does it influence regional climates and local weather?</td>
<td>Variations in global wind systems, including the effects of land and ocean currents, the formation of high and low pressure systems, and the influence of topography, are key factors in understanding regional climates. Local weather patterns are influenced by these larger-scale systems.</td>
</tr>
<tr>
<td>3 How does human activity adversely affect the atmosphere?</td>
<td>The principal sources of atmospheric pollution include CFCs (and their role in stratospheric ozone depletion), carbon dioxide, methane, and nitrous oxide. These pollutants and other gases affect global warming and other climate changes. Noise pollution from traffic and industry also impacts human health.</td>
</tr>
<tr>
<td>4 How can atmospheric pollution be controlled and the problems involved with local and global management of atmospheric pollution?</td>
<td>Strategies for managing atmospheric pollution include reducing emissions from industrial sources, afforestation, and the use of alternative energy sources. Testing controls on CFC emissions, examples from countries with contrasting levels of economic development, are discussed. Global agreements, such as the Montreal Protocol, have been effective in reducing CFC emissions.</td>
</tr>
</tbody>
</table>

Reference to studies in the UK and Sweden (1980s), London, Athens, Beijing, and Los Angeles.
## The hydrosphere

### Key Question Content Notes for Guidance

1. **How is water stored and transferred globally and locally?**
   - The main storage zones of water and the percentages of water held in each, e.g. the global and local hydrological cycles, rising sea levels and coastal inundation. The effects of agriculture, industry and domestic usage upon natural supplies of water, and the impact of climatic change and global warming on sea and ice volumes. The interaction between growth in population and water supply in countries with contrasting levels of economic development.
   - Emphasis on the fragility of the global climate with reference to both falling (past) and rising sea levels (current and future). Diminishing water supplies as a result of agriculture could include the Aral Sea, Prairie and the Nile. Examples of desertification: the Sahara Desert and the Kalahari Desert. There is an opportunity to research local water supplies and the impact of pollution on water supplies.

2. **What has been the impact of human activity on the quantities of water in natural stores?**
   - The impact of agriculture and the supply of water for industrial and domestic use upon natural supplies of water.
   - The impact of sewage disposal upon rivers, lakes and seas and the main health and environmental problems associated with the disposal of sewage sludge.
   - The impact of industrial spillage and river/lake pollution. Management via waste controls, local and regional policies.

3. **How can water supply be sustained and what are the environmental consequences of the artificial storage of water?**
   - The management of water supply on a local and regional scale, including disparities in water resources, the demand for water and the supply of water, and the interplay between natural and artificial systems. Advantages and disadvantages of stopping the supply of water, the effects of pollution on water supplies and the impact of economic development.
   - The interaction between growth in population and water supply in countries with contrasting levels of economic development.

4. **How does human activity lead to the pollution of water stores and how can this form of pollution be managed?**
   - Pollution of groundwater by metals, nutrients and organic compounds. Nutrient enrichment and eutrophication of lakes and rivers, the main sources of eutrophication and its effects. The impact of sewage disposal upon rivers, lakes and the sea and the main health and environmental problems associated with the disposal of sewage sludge.
   - Marine pollution and effects on aquatic and bird life and on the coastal environment. Pollution of rivers and lakes by industrial spillage and river/lake pollution. Management via waste controls, local and regional policies.
### The Biosphere

In this module, two contrasting ecosystems should be studied to a greater depth and should incorporate information from Key Questions 1, 2 and 3; ideally one of these studies can be based upon an area with which the students have some personal familiarity.

#### Key Question

<table>
<thead>
<tr>
<th>Key Question</th>
<th>Content</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>What are the major abiotic and biotic factors which control the distribution of the world's major biomes? How are they structured?</td>
</tr>
<tr>
<td>2</td>
<td>How has human activity both disrupted and destroyed ecosystems?</td>
</tr>
<tr>
<td>3</td>
<td>What methods have been used to preserve, conserve, and restore ecosystems?</td>
</tr>
<tr>
<td>4</td>
<td>What has been the impact of population growth upon the resources of countries at contrasting levels of economic development?</td>
</tr>
</tbody>
</table>

#### Notes for Guidance

- A survey of the global system followed by a study of the distribution of the world's major biomes as listed in the notes for guidance. The characteristics of ecosystems and their interactions should be discussed. Examples of global scale ecosystems should also be chosen from these. Whilst a biome can be considered a global scale ecosystem, ecosystems occur on a variety of scales within broad vegetation zones.
- Photosynthesis and different wavelengths. The influence of light intensity and rainfall on plant productivity.
- The impact of agriculture, deforestation, exploitation and fires upon terrestrial ecosystems. The formation of plagioclimaxes, arrested successions and loss of biodiversity. The effects of clearing tropical rainforest for industrial and agricultural use. The impact of commercial farming in MEDCs and LEDCs (with named examples) leading to the loss of local habitats. The influence of human activity upon marine ecosystems, including coastal waters, oceans and coral reefs.
- Methods to include National Parks, afforestation, maintaining biological diversity through pollution control, changing agricultural systems, etc. The impact of international protocols (e.g. Rio de Janeiro, Montreaux, Montreal, Kyoto, Bonn and Bali) and pressure from groups such as the WWF. Sustainable development within conservation areas.
- A study of the population models followed by contrasting case studies, e.g. Mauritius, India, UK. Examples can include China, UK, Brazil, the Galapagos Islands and areas that are local to the Centre.
- Case studies as appropriate or a survey of conservation and restoration of ecosystems, with reference to a broader range of examples.
5 Coursework: guidance for centres

5.1 General information

Candidates should produce a report of 1500–2000 words on an issue arising out of their course of study.

The report may focus on a local, regional, national or global issue. Whilst the issue may derive out of the traditional areas of environmental science, the report must contain an investigation and evaluation of the management issues associated with the topic. The research topic may be chosen from any part of the 4 units of this syllabus.

Whilst secondary source material is useful in providing background information, it is important that candidates use primary sources and collect field data. Candidates may use sources of information other than those obtained from field study; these may include the internet, the media, documented data from companies and organisations.

The report is also a test of a candidate’s ability to confine their report to the word limit of 2000 words; over-long reports may contain too much extraneous material which may count against the candidate at final marking.

Candidates are expected to clearly identify an environmental management issue and then organise their report into the following stages of:

- An introduction identifying an issue expressed through a hypothesis or question.
- A methodology, which outlines the investigative avenues used for the study and justifies their use.
- A results and analysis section. This should form the main part of the study and contain data expressed through illustrative techniques such as pictorial (diagrams and photographs), tables and graphs. This illustrative material should be analysed through detailed descriptions and explanations.
- A conclusion which draws together the findings of the investigation.
- An evaluation of the study which assesses its success and/or shortcomings.

To ensure that they comply with the requirements of the syllabus, centres must seek approval for project titles, in advance, from Cambridge International. The approval form asks for candidate details, project title and a brief description for each candidate.

The deadlines and methods for submitting report proposals are in the Cambridge Handbook available on our website.

The form must be submitted by email to Cambridge International at cieopf@cambridgeinternational.org. Syllabus number and centre number should be clearly shown.

The form, and the instructions for completing it, may be downloaded from www.cambridgeinternational.org/samples. The database will ask you for the syllabus code (i.e. 8291) and your centre number, after which it will take you to the correct forms. Follow the instructions when completing each form.

It is the responsibility of teachers in the centre to monitor the work undertaken by the candidates and make certain that the work complies with the syllabus. The report should be assessed by teachers in the centre.

The deadlines and methods for submitting internally assessed marks are in the Cambridge Handbook available on our website.
5.2 Example of a research report

Research topic: ‘To what extent has industrial pollution of a nearby river been successfully controlled and reduced’?

Relation of topic to syllabus:

(a) The problem identified is the pollution of a river through industrial effluent and the extent to which industries manage their waste and river pollution has been reduced.

(b) This topic relates to waste management, the need to dispose of industrial waste materials and manage/reduce river pollution.

(c) Data sources might include:
   • counting the variety of species at various points before and after the discharge point
   • considering the different species present at these points
   • testing samples of river water before and after the discharge point
   • investigating the policies of contributing industries
   • using local or internet data sources.

(d) Candidates should ascertain how much data they can collect and analyse in the time available to enable them to produce viable conclusions.

(e) The scale of the project should not be so small that valid data cannot be identified or that a variety of environments need to be examined. On the other hand, it should not be so big as to make the collection of data too time-consuming.
5.3 Assessment criteria for Coursework

There are three skills that will be assessed in the preparation of the report:

<table>
<thead>
<tr>
<th>Skill</th>
<th>Description</th>
<th>Mark</th>
</tr>
</thead>
<tbody>
<tr>
<td>C1</td>
<td>Research and planning</td>
<td>6</td>
</tr>
<tr>
<td>C2</td>
<td>Data collection and presentation</td>
<td>9</td>
</tr>
<tr>
<td>C3</td>
<td>Conclusion and evaluation</td>
<td>5</td>
</tr>
</tbody>
</table>

Mark schemes for assessment should be based on the following criteria:

**Skill C1: Research and planning**
(a) The hypothesis or question is clearly stated. 1 mark
(b) There is evidence of knowledge through a clear explanation of the principle underpinning the hypothesis or question. 2 marks
(c) The plan includes appropriate methods clearly explained. 2 marks
(d) The developed plan is effective at testing the hypothesis. 1 mark

**Skill C2: Data collection and presentation**
(a) Data observations are clearly presented in a suitable format. 2 marks
(b) Data is collected and recorded accurately and with an appropriate degree of precision. 2 marks
(c) The report is organised in a logical order of presentation (information, description, explanation, diagrams). 2 marks
(d) The quality of written communication. 2 marks
(e) Suitable statistical tools are used to analyse the data. 1 mark

**Skill C3: Conclusions and evaluation**
(a) Full conclusions are drawn, supported by reference to the data. 2 marks
(b) Knowledge of environmental and management principles are used to explain trends and patterns in own results. 2 marks
(c) There is an evaluative assessment of the report in terms of its limitations and level of success. 1 mark

This total of 20 marks will then be doubled to a mark out of 40.

Each Skill criterion is marked on a scale of 0 to 1 or 2, as follows:

2 = criterion fully met, 1 = criterion partly met, 0 = criterion not met at all.
or 1 = criterion met, 0 = criterion not met at all.

**Recording candidates’ marks**
Candidates’ marks must be recorded on the Individual Candidate Record Card produced by Cambridge International. These forms, and the instructions for completing them, may be downloaded from www.cambridgeinternational.org/samples. The database will ask you for the syllabus code (i.e. 8291) and your centre number, after which it will take you to the correct forms. Follow the instructions when completing each form.
5.4 Moderation

All aspects of coursework will be moderated. Centres are expected to write their own Schemes of Assessment; these should comply with the syllabus aims and assessment objectives.

(a) Internal Moderation
When several teachers in a centre are involved in internal assessment, arrangements must be made within the centre for all candidates to be assessed to the same standard. It is essential that the marks for each skill assigned within different teaching groups (or classes) are moderated internally for the whole centre entry. The centre assessments will then be moderated externally by Cambridge International.

The internally moderated marks for all candidates must be recorded on the Coursework Assessment Summary Form. This form, and the instructions for completing it, may be downloaded from www.cambridgeinternational.org/samples. The database will ask you for the syllabus code (i.e. 8291) and your centre number, after which it will take you to the correct form. Follow the instructions when completing the form.

(b) External Moderation
External moderation of internal assessment is carried out by Cambridge International. Centres must submit candidates’ internally assessed marks to Cambridge International. The deadlines and methods for submitting internally assessed marks are in the Cambridge Handbook available on our website.

Once it has received the marks, Cambridge International will draw up a list of sample candidates whose work will be moderated (a further sample may also be requested), and will ask the centre to immediately send the Coursework of these candidates together with Individual Candidate Record Cards and Coursework Assessment Summary Forms. These forms, and the instructions for completing them, may be downloaded from www.cambridgeinternational.org/samples. For each candidate on the list, every piece of work which has contributed to the final mark should be sent to Cambridge International.

If there are ten or fewer candidates, the Coursework that contributed to the final mark for all the candidates must be sent to Cambridge International.

A further sample may be required and all record and supporting written work should be retained until after publication of results.

For more information about external moderation please consult the Cambridge Handbook.

Ideally, candidates should use loose-leaf A4 file paper for the Coursework. Original work is preferred for moderation, but authenticated photocopies can be sent if absolutely necessary.

Pieces of work should not be stapled together. Each piece of work should be clearly and securely labelled with:

- the centre number
- the candidate’s name and number
- the title of the report
- the skill being assessed
- a copy of the mark scheme used
- the mark awarded.
6 Appendix

6.1 Mathematical requirements

Cambridge International assumes that all candidates for Environmental Management are able to:

- perform calculations involving addition, subtraction, multiplication and division of numbers
- perform numerical work accurately and handle calculations so that significant figures are neither lost unnecessarily nor carried out beyond what is justified
- make approximate evaluations of numerical expressions (e.g. \( \pi^2 \approx 10 \)) and use such approximations to check the magnitude of machine calculations
- express fractions as percentages and vice versa
- recognise and use expressions in decimal and standard form notation
- use tables or calculators to evaluate powers, roots, reciprocals, arithmetic means
- substitute physical quantities into equations using consistent units
- change the subject of an equation
- solve simple algebraic equations
- formulate simple algebraic equations as mathematical models of physical situations
- comprehend the meanings of, and use the symbols/notations: <, >, =, /, \( \alpha \), \( \approx \)
- calculate areas of right-angled and isosceles triangles, circumferences and areas of circles and volumes of rectangular blocks and cylinders
- test a relationship for direct proportionality graphically and numerically
- select appropriate variables and scales for plotting a graph, especially to obtain a linear graph of the form \( y = mx + c \)
- determine and interpret the slope and intercept of a linear graph
- choose by inspection a straight line that will serve as the ‘least bad’ linear model for a set of data presented graphically: use of scatter graphs and lines of best fit
- understand and use the area below a curve where this has physical significance.
6.2 Glossary of terms

It is hoped that the glossary (which is relevant only to science subjects) will prove helpful to candidates as a guide (i.e. it is neither exhaustive nor definitive). The glossary has been deliberately kept brief not only with respect to the number of terms included but also to the descriptions of their meanings. Candidates should appreciate that the meaning of a term must depend in part on its context.

1 Define (the term(s)... is intended literally, only a formal statement or equivalent paraphrase being required.
2 What is meant by (the term(s)... normally implies that a definition should be given, together with some relevant comment on the significance or context of the term(s) concerned, especially where two or more terms are included in the question. The amount of supplementary comment intended should be interpreted in the light of the indicated mark value.
3 State implies a concise answer with little or no supporting argument (e.g. a numerical answer that can readily be obtained ‘by inspection’).
4 List requires a number of points, generally each of one word, with no elaboration. Where a given number of points is specified, this should not be exceeded.
5 Explain may imply reasoning or some reference to theory, depending on the context.
6 Describe requires the candidate to state in words (using diagrams where appropriate) the main points of the topic. It is often used with reference either to particular phenomena or to particular experiments. In the former instance, the term usually implies that the answer should include reference to (visual) observations associated with the phenomena.
   In other contexts, describe should be interpreted more generally (i.e. the candidate has greater discretion about the nature and the organisation of the material to be included in the answer). Describe and explain may be coupled, as may state and explain.
7 Discuss requires the candidate to give a critical account of the points involved in the topic.
8 Outline implies brevity (i.e. restricting the answer to giving essentials).
9 Predict or deduce implies that the candidate is not expected to produce the required answer by recall but by making a logical connection between other pieces of information. Such information may be wholly given in the question or may depend on answers extracted in an earlier part of the question.
10 Suggest is used in two main contexts (i.e. either to imply that there is no unique answer or to imply that candidates are expected to apply their general knowledge to a ‘novel’ situation, one that may be formally ‘not in the syllabus’).
11 Find is a general term that may variously be interpreted as calculate, measure, determine, etc.
12 Compare is used to identify similarities.
13 Contrast is used to identify differences.
14 Calculate is used when a numerical answer is required. In general, working should be shown, especially where two or more steps are involved.
15 Measure implies that the quantity concerned can be directly obtained from a suitable measuring instrument (e.g. length, using a rule, or mass, using a balance).
16 Determine often implies that the quantity concerned cannot be measured directly but is obtained by calculation, substituting measured or known values of other quantities into a standard formula (e.g. relative molecular mass).
17 Estimate implies a reasoned order of magnitude statement or calculation of the quantity concerned, making such simplifying assumptions as may be necessary about points of principle and about the values of quantities not otherwise included in the question.
18 *Sketch*, when applied to graph work, implies that the shape and/or position of the curve need only be qualitatively correct, but candidates should be aware that, depending on the context, some quantitative aspects may be looked for (e.g. passing through the origin, having an intercept, asymptote or discontinuity at a particular value).

In diagrams, *sketch* implies that a simple, freehand drawing is acceptable; nevertheless, care should be taken over proportions and the clear exposition of important details.
7 Other information

Equality and inclusion

We have taken great care in the preparation of this syllabus and related assessment materials to avoid bias of any kind. To comply with the UK Equality Act (2010), we have designed this qualification with the aim of avoiding direct and indirect discrimination.

The standard assessment arrangements may present unnecessary barriers for candidates with disabilities or learning difficulties. Arrangements can be put in place for these candidates to enable them to access the assessments and receive recognition of their attainment. Access arrangements will not be agreed if they give candidates an unfair advantage over others or if they compromise the standards being assessed. Candidates who are unable to access the assessment of any component may be eligible to receive an award based on the parts of the assessment they have taken.

Information on access arrangements is found in the Cambridge Handbook, which can be downloaded from the website www.cambridgeinternational.org/examsofficers

Language

This syllabus and the associated assessment materials are available in English only.

Grading and reporting

Cambridge International AS Level results are shown by one of the grades a, b, c, d or e, indicating the standard achieved, ‘a’ being the highest and ‘e’ the lowest. ‘Ungraded’ indicates that the candidate’s performance fell short of the standard required for grade ‘e’. ‘Ungraded’ will be reported on the statement of results but not on the certificate. The letters Q (result pending), X (no result) and Y (to be issued) may also appear on the statement of results but not on the certificate.

For the assessment of languages other than English, Cambridge International also reports separate speaking endorsement grades (Distinction, Merit and Pass), for candidates who satisfy the conditions stated in the syllabus.

Exam administration

To keep our exams secure, we produce question papers for different areas of the world, known as ‘administrative zones’. We allocate all Cambridge schools to one administrative zone determined by their location. Each zone has a specific timetable. Some of our syllabuses offer candidates different assessment options. An entry option code is used to identify the components the candidate will take relevant to the administrative zone and the available assessment options.
