Paper 2 Algorithms, Programming and Logic

For examination from 2023

SPECIMEN PAPER

1 hour 45 minutes

You must answer on the question paper.

No additional materials are needed.

INSTRUCTIONS

- Answer all questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do not use an erasable pen or correction fluid.
- Do not write on any bar codes.
- Calculators must not be used in this paper.

INFORMATION

- The total mark for this paper is 75.
- The number of marks for each question or part question is shown in brackets [].
- No marks will be awarded for using brand names of software packages or hardware.

This document has 16 pages. Any blank pages are indicated.

© UCLES 2020 [Turn over

- 1 Four pseudocode descriptions and five pseudocode statements are shown.
 - (a) Draw a line to link each pseudocode description to the most appropriate pseudocode statement.

Some pseudocode statements will **not** be used.

Pseudocode description Pseudocode statement FOR...TO...NEXT a loop that will always iterate at least once IF...THEN...ELSE...ENDIF a conditional statement to deal with many possible outcomes WHILE...DO...ENDWHILE a loop that will always iterate a set number of times CASE...OF...OTHERWISE...ENDCASE a conditional statement with different outcomes for true and false REPEAT...UNTIL [4] (b) Using a single loop, write an algorithm in pseudocode to output 50 names that have been stored in the array, Name []

| 2 | Describe the purpose of validation and verification checks during data entry. |
|---|---|
| | Include an example for each. |
| | Validation check |
| | |
| | |
| | |
| | Verification check |
| | |
| | |
| | [4] |

| | | | · | |
|---|------------------------|----------------|---|-----|
| 3 | Tick (✓) | one box to s | show the named section of a program that performs a specific task. | |
| | Α | file | | |
| | В | function | | |
| | С | parameter | | |
| | D | process | | [1] |
| | | | | • |
| 4 | | _ | system is an example of a computer system that is made up of sub-system | S. |
| | allo | ws the user t | to enter details for a new destination or select a previously saved destination in the form of a visual map or as a list. | n |
| | Draw a | structure diaç | gram for this part of the satellite navigation system. | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | | |
| | | | [| 4] |

An algorithm has been written in pseudocode to input some numbers. It only outputs any numbers that are greater than or equal to 100. The number 999 is not output and stops the algorithm.

| WHI | UT Number LE Numbers <> 999 DO IF Number > 100 THEN OUTPUT Number ENDIF WHILE PUT Number |
|-----|---|
| (a) | Identify the four errors in the pseudocode and suggest corrections. |
| | Error 1 |
| | Correction |
| | |
| | Error 2 |
| | Correction |
| | |
| | Error 3 |
| | Correction |
| | |
| | Error 4 |
| | Correction |
| | [4] |
| (b) | Write a pseudocode statement to change the corrected algorithm to output all numbers between 100 and 200 inclusive. |
| | You do not need to rewrite the whole algorithm. |
| | |

6 Consider this logic expression.

$$X = (AANDB)OR(BANDNOTC)$$

(a) Draw a logic circuit for this logic expression.

Each logic gate must have a maximum of **two** inputs.

Do **not** simplify this logic expression.

(b) Complete the truth table from the given logic expression.

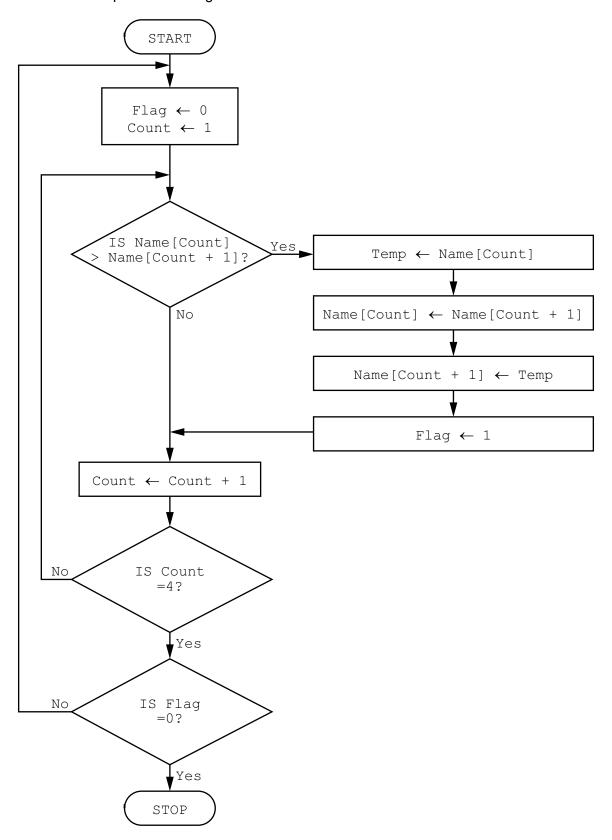

| A | В | С | Working space | X |
|---|---|---|---------------|---|
| 0 | 0 | 0 | | |
| 0 | 0 | 1 | | |
| 0 | 1 | 0 | | |
| 0 | 1 | 1 | | |
| 1 | 0 | 0 | | |
| 1 | 0 | 1 | | |
| 1 | 1 | 0 | | |
| 1 | 1 | 1 | | |

BLANK PAGE

7 This flowchart represents an algorithm.

(a) The array Name[1:4] used in the flowchart contains the following data:

| Name[1] | Name[2] | Name[3] | Name[4] | |
|---------|---------|---------|---------|--|
| Jamal | Amir | Eve | Tara | |

Complete the trace table using the data given in the array.

| Flag | Count | Name[1] | Name[2] | Name[3] | Name[4] | Temp |
|------|-------|---------|---------|---------|---------|------|
| | | Jamal | Amir | Eve | Tara | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |

| (b) | Describe what the algorithm represented by the flowchart is doing. | |
|-----|--|--|
| | | |
| | | |
| | | |

11 A database table, 2018MOV, is used to keep a record of movie details.

| CatNo | Title | Genre1 | Genre2 | Blu-ray | DVD | Streaming |
|-------|-------------------------------|-----------|----------|---------|-----|-----------|
| 18m01 | Power Rangers | Adventure | Fantasy | Yes | No | Yes |
| 18m02 | Baywatch | Comedy | Drama | Yes | No | Yes |
| 18m03 | Table 19 | Comedy | Drama | Yes | Yes | No |
| 18m04 | Wonder Woman | Action | Fantasy | Yes | No | Yes |
| 18m05 | Justice League | Action | Fantasy | Yes | Yes | Yes |
| 18m06 | Twilight | Thriller | Action | Yes | Yes | No |
| 18m07 | Ant Man | Action | Fantasy | No | Yes | No |
| 18m08 | Venice Beach | Action | History | No | Yes | No |
| 18m12 | Fast Five | Action | Thriller | No | Yes | No |
| 18m15 | King Kong | Adventure | Fantasy | No | Yes | No |
| 18m16 | Transformers: The Last Knight | Action | Sci-Fi | Yes | Yes | Yes |
| 18m17 | The Dark Tower | Fantasy | Sci-Fi | Yes | Yes | No |
| 18m19 | Beauty and the Beast | Fantasy | Romance | Yes | Yes | Yes |
| 18m21 | The Mummy | Action | Fantasy | No | No | Yes |
| 18m22 | Star Wars: Episode VIII | Sci-Fi | Action | Yes | No | Yes |
| 18m23 | Guardians of the Galaxy | Action | Sci-Fi | Yes | Yes | Yes |
| 18m26 | Thor | Action | Sci-Fi | No | Yes | Yes |
| 18m27 | Twilight | Fantasy | Sci-Fi | No | No | Yes |
| 18m30 | Beneath | Action | Fantasy | Yes | No | No |
| 18m31 | Despicable Me | Animation | Action | Yes | Yes | No |

| (a) | Sta | te the number of records in the database table. | |
|-----|------|--|-------|
| | | | [1] |
| (b) | (i) | Give the name of the field that would be used for the primary key. | |
| | | | . [1] |
| | (ii) | State the reason for choosing this field for the primary key. | |
| | | | |
| | | | . [1] |

(c) Complete the table to identify the most appropriate data type for each field based on the data shown in the database table, 2018MOV.

| Field | Data type |
|-----------|-----------|
| CatNo | |
| Title | |
| Genre1 | |
| Streaming | |

[2]

(d) Complete the structured query language (SQL) to return the category number and title for all Comedy movies.

| SELECT | CatNo, | , ' | Title |
|--------|--------|-----|---------|
| | | | 2018MOV |
| WHERE | Genre1 | = | ; |

[2]

| 12 | The | The variables x , y and z are used to store data in a program: | | | | | | | |
|----|-----|---|--|--|--|--|--|--|--|
| | • | X stores a string Y stores a position in the string (e.g. 2) Z stores the number of characters in the string. | | | | | | | |
| | (a) | Write pseudocode statements to declare the variables \mathtt{X}, \mathtt{Y} and $\mathtt{Z}.$ | | | | | | | |
| | | | | | | | | | |
| | | | | | | | | | |
| | | | | | | | | | |
| | | | | | | | | | |
| | | [3] | | | | | | | |
| | (b) | The function LENGTH (X) finds the length of a string X . | | | | | | | |
| | | The function SUBSTRING (X,Y,Z) finds a substring of X starting at position Y and Z characters long. The first character in X is in position 1. | | | | | | | |
| | | Write pseudocode statements to: store the string "Programming is fun" in X find the length of the string and output it extract the word fun from the string and output it. | | | | | | | |
| | | | | | | | | | |
| | | | | | | | | | |
| | | | | | | | | | |
| | | | | | | | | | |
| | | | | | | | | | |
| | | | | | | | | | |
| | | | | | | | | | |
| | | | | | | | | | |
| | | | | | | | | | |

The one-dimensional (1D) array StudentName[] contains the names of students in a class. The two-dimensional (2D) array StudentMark[] contains the mark for each subject, for each student. The position of each student's data in the two arrays is the same, for example, the student in position 10 in StudentName[] and StudentMark[] is the same.

The variable ClassSize contains the number of students in the class. The variable SubjectNo contains the number of subjects studied. All students study the same number of subjects.

The arrays and variables have already been set up and the data stored.

Students are awarded a grade based on their average mark.

| Average mark | Grade awarded |
|--|---------------|
| greater than or equal to 70 | distinction |
| greater than or equal to 55 and less than 70 | merit |
| greater than or equal to 40 and less than 55 | pass |
| less than 40 | fail |

Write a program that meets the following requirements:

- calculates the combined total mark for each student for all their subjects
- calculates the average mark for each student for all their subjects, rounded to the nearest whole number
- outputs for each student:
 - name
 - combined total mark
 - average mark
 - grade awarded
- calculates, stores and outputs the number of distinctions, merits, passes and fails for the whole class.

You must use pseudocode or program code and add comments to explain how your code works.

| ou do not need to initialise the data in the array. |
